

EncryptaGuard LLC: Standard Residential Profile

Version: 1.5 (February 2026)
Classification: Residential Privacy & Safety Reference

1. Core Privacy Philosophy

EncryptaGuard LLC utilizes a **Physical Isolation** architecture to provide enterprise-grade protection for the modern household. Our methodology prioritizes **Family Safety** and **Network Sovereignty**, ensuring that personal activities—such as banking and children’s educational streams—are physically secured and encrypted at the network edge.

2. Managed Household Intelligence

These categories are active fleet-wide to ensure your home remains a "Zero-Trust" environment for outside threats.

PROTECTION CATEGORY	TECHNICAL PURPOSE	HOUSEHOLD VALUE
Privacy Hardening	Encrypts all outbound requests and hides them from your ISP.	Absolute Family Privacy
Malware/C2 Block	Stops smart home devices from "phoning home" to hacker servers.	IoT Security Shield
Identity Defense	Blocks known phishing pages and credential harvesting sites.	Identity Theft Prevention
Ad-Suppression	Eliminates background trackers and data-hungry ads.	3x Faster Streaming & Gaming

3. The "Safe Home" Filter

To maintain **Household Performance**, the EncryptaGuard Residential Profile enforces a policy designed to protect family members from high-risk or inappropriate content.

A. Kid-Safe Web Categories

We mitigate risk by restricting access to categories that often serve as vectors for malware or are unsuitable for family environments:

- Gambling & Betting:** Prevents exposure to predatory financial platforms.

- **Adult Content:** Enforces household safety standards at the hardware level.
- **Illegal/Copyrighted Material:** Protects the homeowner from ISP-level penalties due to guest or minor activity.

B. Speed & Privacy Optimization

- **DNS-over-HTTPS (DoH):** All DNS requests are wrapped in an encrypted tunnel, making your family's browsing habits invisible to your ISP.
 - **Bandwidth Reclamation:** We block thousands of background telemetry requests from smart home gadgets, reclaiming up to 40% of your bandwidth for 4K streaming.
-

4. Total Household Resilience

EncryptaGuard LLC maintains a **Standardized Global Policy** to ensure every home in our fleet is equally protected.

- **Automated Safety Updates:** New threats are blocked across the fleet in real-time without you lifting a finger.
 - **Zero-Touch Setup:** Your node arrives pre-hardened; we handle all performance optimizations remotely via secure, outbound-only tunnels.
 - **No Manual Work:** We eliminate the complex configuration required to secure a modern home network.
-

5. Privacy Commitment

EncryptaGuard LLC **does not log individual browsing history**. Our nodes process requests locally on-premise to determine if they match a security blocklist. We do not sell data, store PII (Personally Identifiable Information), or maintain records of where your family goes online.

Managed Resilience by EncryptaGuard LLC *Hardened Infrastructure. Privacy Focused. Remotely Managed.*
